Appinventor
Enhancement 1
Display time taken to do the quiz

Step 1: Add a clock component and a label to display time.

- **New Variable**
  - Initialize global (Start time) to 0

- **Current Instant**
  - Takes current time and subtracts start time to get interval time.

- **We print to the label that contains the time.**

- **We set the start time to the current time on the clock.**

- **We turn the timer on.**

- **Turn timer off when done.**
