Diskless booting

Assignment
This assignment will have you create a boot a Linux system from the network. The physical Linux files will reside in an NFS partition.

Tasks
Follow the instructions given in the class slides to create a diskless Ubuntu server instance. Utilize your existing dhcp, nfs, tftp and other servers.

Report
This will be demoed to the instructor on or after the due date.

Submission

- There is no submission necessary as you will pass this off directly.
