IT 3110: Systems Automation

Shell Scripting

Assignment
This assignment will hone your skills as a Bash shell programmer.

Tasks
Create a script called [add_user_all.sh]. This script will ssh to all of your Linux machines and create a new user on each. The script should receive the user, uid, gid via command-line argument and create that user on all your Linux machines. Example usage:

```
./add_user_all.sh tommy 2000 2000
```

Report
Take a print screen of your script running. Also upload your scripts.

Submission
