Assignment

This assignment will hone your skills as a Bash shell programmer.

Tasks

Create a script called \texttt{add_user_all.sh}. This script will ssh to all of your Linux machines and create a new user on each. The script should receive the user, uid, gid via command-line argument and create that user on all your Linux machines. Example usage:

\begin{verbatim}
./add_user_all.sh tommy 2000 2000
\end{verbatim}

Report

Take a print screen of your script running. Also upload your scripts.

Submission
